**DETAILED ACTION**

1. The Remark filed by Applicant on 06/30/2006 has been entered.

***Response to Amendment/Arguments***

2. Applicant's amendment and arguments filed on 06/30/2006 have been fully considered and they are found persuasive.

3. The rejection of claims 1-8 and 12-16 under 35 U.S.C. 102(b) as being anticipated by Miyake et al., U.S. Patent No. 6,399,668 (hereinafter "Miyake") is withdrawn.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1713

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1-8 and 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shioji et al., U.S. Patent No. 6,297,336 (hereinafter "Shioji"). Shioji teaches a monomer composition comprising acrylic acid, sodium acrylate and magnesium acrylate. See col. 3, line 23 through col. 4, line 4. The basic requirements of prima facie case of obvious are: (1) there must be some suggestion or motivation, either in the reference themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings; (2) there must be a reasonable expectation of success; (3) the prior art reference (or references when combined) must teach or suggest all the claim limitations. See MPEP 2143. "There are three possible sources for a motivation to combine references: the nature of the

Art Unit: 1713

problem to be solved, the teachings of the prior art, and the knowledge of persons of ordinary skill in the art." See In re Rouffet, 149 F.3d 1350, 1357, 47 USPQ2d 1453, 1457-58 (Fed. Cir. 1998). Although Shioji does not disclose in the working examples composition containing are three monomers, based on the specification as a whole a polymer chemist of ordinary skill in the art would be motivated to modify Shioji by preparing water soluble polymers. Such modification would be obvious because one would is a reasonable expectation of success that propylene copolymers as taught by Shioji would be similarly useful and applicable to detergents. See Richeson, col. 16, lines 60-65. Therefore, claims 1-8 and 12-16 are deem as being unpatentable over Shioji.
